MAKE THE GREAT ESCAPE
FROM THE MATRIX

IAIN CLIFFORD
The President of the
Republic of Old Souls.

Executive Summary

The global financial system operates like a vast game of Monopoly. Living men and women, upon birth, are issued a certificate that creates a **body corporate “person.”** By acting as agents for this artificial person, individuals unconsciously transfer their life energy — their labor, creativity, and capacity to produce — onto the Monopoly board of commerce.

On this board, **banks act as nominees.** They treat the energy of the living being, refracted through the body corporate, as if it were the bank’s own credit. Each signature, each payment, and each mortgage note becomes another move on the Monopoly board, where the banks record the credit as their asset while concealing its true source. In effect, the living being’s energy is abstracted into negotiable instruments and booked into ledgers that serve the financial system rather than the individual.

The **Infinite Money Program** and the **Mortgage Redemption Program**, established under the Republic of Old Souls, provide a pathway to reverse this flow. Through the structure of an **international 98-series Grantor Trust**, members and envoys are enabled to lawfully recoup credit that has been diverted. This fiduciary vehicle serves as the **gateway into the U.S. Treasury’s ledgers**, where abandoned credit and over-withholding are accounted. By filing the appropriate instruments — including 1099-OID returns and fiduciary 1041 filings — the trust reclaims the energy that originated from the living source.

In this framework, what appears as technical tax recoupment is, in fact, a deeper process: the reassertion of sovereignty over one's own life energy. Members are not debtors in the game of Monopoly, but creditors. Their energy, once diverted into the board, can be **drawn back to its origin** through proper recognition of nominee banking practices and trust-based fiduciary filings.

In summary, this report sets out the technical and legal justifications for such recoupments of energy. It explains how the Monopoly game is played, how banks act as nominees, and how the Republic of Old Souls equips its envoys with the means to reclaim what was always theirs — their credit, their energy, their freedom.

Registration of the Birth Certificate as a Security

- At birth, a **certificate is created and registered**, establishing a cestui que trust account.
- This account is tied to Social Security (U.S.) or National Insurance (U.K.), forming the identifier through which credit is hypothecated.
- Since **HJR-192 (1933)** removed gold-backed money, all debts are discharged in credit — with the individual's bond as the ultimate collateral.

Banks as Nominees and Credit Creators

- **Richard Werner** empirically demonstrated that banks create money ex nihilo when they record the borrower's signature as their asset.
- The **Bank of England (2014, Money in the Modern Economy)** confirmed ~97% of money is created by commercial banks in this way.
- The **Chicago Fed's Modern Money Mechanics** outlined how deposits arise through this book-entry process.
- Thus, when a member signs a note or makes a payment, the bank operates as a **nominee**, recording the value as its own asset but failing to account it back to the source.

Bills of Exchange Act 1882 – Legal Context

- Section 3(1): A Bill of Exchange is “an unconditional order in writing... requiring payment of a sum certain in money.”
- Section 41: If not dishonoured within 72 hours, it is deemed accepted.
- Section 54: Acceptance and payment discharge the underlying obligation.
- Section 59: Once accepted, the drawee (bank) is bound.

Implication in this context:

- Every **bank payment, loan note, or obligation** functions in practice as a **bill of exchange**.
- Banks, by charter, operate within this framework: payments tendered are deemed bills, which they accept, record, and recycle as assets.
- This doesn't mean bills of exchange are separately “monetized” by members — but that **the banking system itself treats all payments as bills** under commercial law.

Body Corporate as Public Banker

- The “body corporate” (legal person created at birth) issues these bills, which the banks treat as their assets.
- By recording them as assets, banks are enabled to match liabilities and create currency.
- Case law (e.g., Nova (Jersey) Knit Ltd v Kammgarn Spinnerei GmbH [1977]) reflects the doctrine that **every commercial instrument is, in substance, a bill of exchange.**
- Thus, mortgages and payments are **not loans from the bank**, but bills issued by the member-body corporate, which the bank uses for its own balance sheet expansion.

Financing Mechanism

- Under **HJR-192**, debts are prepaid; Federal Reserve Notes are obligations, not money.
- Every bank “payment” is therefore evidence of a bill of exchange issued by the member.
- Banks conceal this origin, booking the credit as their own.
- These unreported credits constitute **abandoned property**, recoverable via IRS processes.

Remedy: 98 Grantor Trust Filings

Structure

Foreign grantor, U.S. trustee, foreign trust.

- 1 File **1099-OID** showing the bank's nominee status and withheld credit.
- 2 File **1041** as a **Complex Trust**, selecting "No" for mandatory distributions.
- 3 Attach **W-8BEN/W-8BEN-E** to confirm foreign grantor status.
- 4 Refund is issued to the trustee in trust.

Strategic Implication

By combining:

- Werner's proof of credit creation,
- Bank of England's confirmation,
- Chicago Fed's mechanics,
- Bills of Exchange Act 1882 (showing all payments are bills by default),
- HJR-192 (mandating prepaid debt),

...the conclusion is that the **living man/woman, via the body corporate, is the original issuer of value**. Banks, acting as nominees, misaccount it as theirs. Through 98 Grantor Trust filings, abandoned credits can be lawfully recouped.
